

PHOTO LITHIUM - CR123

Power for lightweight appliances

Product benefits

- Low internal resistance to provide rapid flash recovery time and quick shooting
- A long shelf life up to 10 years
- Powerful lithium technology
- Reliable even in a wide range of operating temperatures (-40°C to +70°C)

Applications

Because of the use of lightweight materials, the Panasonic CYLINDRICAL LITHIUM CR123 batteries are perfect for small cameras as well as portable lighting systems. The batteries can also be used in safety equipment, security sensors and smoke detectors.

More flashing power

CYLINDRICAL LITHIUM CR123 batteries have a spiral structure and enlarged surface areas of the positive and negative electrodes. This design allows a current as high as several amperes to be drawn. Very convenient for flashlights that need instant power.

Low self-degradation rate and excellent storability

Panasonic CYLINDRICAL LITHIUM CR123 batteries contain manganese dioxide, a substance that is chemically very stable. 90% of the battery capacity remains even after 10 years of storage if preservation conditions are proper.

Superior safety

CYLINDRICAL LITHIUM CR123 batteries feature a structural design for an optimal safety and stable substances for the active materials. They have endured several safety tests whereby we can say they have an excellent safety that is verified. The CYLINDRICAL LITHIUM CR123 batteries have been approved under the safety standard (UL1642) of UL (Underwriters Laboratories Inc.).

Code	CR-123AL
Size	CR123
Technology	Photo Lithium
Voltage	3V
Height	34,4 mm
Diameter	17,1 mm
Weight	17 g
Shelf Life	10 year(s)
